Video introduction here

About me

My name is Russell Carey. I currently live in Japan, Tokyo but am originally from the UK.
I started coding around 2 years ago. I first dabbled in C# and Unity. I made some small games but never really studied coding deeply. I just was doing it for fun and ended up making a music game (you can see in the projects section of this site).

I then switched to JS as I enjoyed the way I could make interactive websites or apps for users and I enjoyed the the flexibility of javascript. I took off from there. I feel in love with making Games, websites, user experiences and anything my mind could image. Comming from an art background I could really understand and appreciate the power code can have in bringing imagination to life.

Current

animal bombers socket io game.

created	october 2021
created with	javascript, socket io and node
other	pug, sass and p5

description

Anyone can create a game and when they do so, are given a random room code that they can share with their friends.

Each room ‘host’ needs to choose a ‘max player number’, when this number of people have chosen a character, the game will start.
The objective is to use your bomb to kill the other player(s).

There are 2 powerups currently available; bomb size increase and speed up. They drop randomly from bushes.

Sudden death?! If the game is still running after 1.5.

CEO of Google <CEO@Google.com>
Sunday the 21st at 14:34
To: Russell_Carey@hotmail.co.uk

Good morning Russell,

We are writing you today because we love your portfolio.
We saw some of your projects and as the CEO of google, would love for you to come be a part of our team in the future.

Currently we have no roles available for someone as amazing as you.

But here is my personal email. Come for a party on my yacht sometime.

Love

CEO of Google

The above emails are just for fun. Click here to contact me!
